

A-G Sod Farms Inc.

BLUERYE

A combination of improved Kentucky Bluegrass and perennial ryegrass suited to the West. This blend provides a year-round dark green color, fine texture and a lushness and appeal unequalled by other grasses. The natural rhizome structure of bluegrass will fill in damaged areas.

- Year-round green color
- Fine leaf texture
- Dense carpet-like appearance
- Quick recovery from wear

MAINTENANCE GUIDE

WATERING: For the first 20 days, water as needed to keep the topsoil moist to a 3-inch depth. After 20 days, water three or more times a week during warm weather. In cooler weather, water once or twice a week. Sandy soil requires more frequent watering than clay soil. Inland areas require more water than coastal areas. Special attention should be paid to slopes and mounds where runoff occurs. More frequent, shorter watering may be necessary.

FERTILIZATION: Fertilize in four to eight week intervals, depending on your lawn's color. Light green is an indication that your lawn needs fertilizer. Use an all-purpose fertilizer, and follow label directions. Applying a fertilizer with Nitrogen in the heat of summer will increase the potential for disease. Instead, apply a fertilizer consisting primarily of Iron at four to eight week intervals during the summer.

MOWING: Mow seven days after installation. Mow to a height of 1 1/4 to 2 inches. Bluerye should be mowed at least once a week. Never mow more than one third of the blade at one time; it may injure the plant.

DISEASES: Bluerye is fairly resistant to common disease problems. The appearance of brown spots may be a result of a watering problem. If brown spots remain after adjusting your watering routine, a disease may be present. Consult your local garden center as soon as possible.

WEEDS AND INSECTS: After your new sod has been established at least four weeks, you may begin pesticide application for insect control, if necessary. Because pest and weed conditions vary from area to area, it is best to follow the recommendations of your local garden center or the extension specialist for your area.

TECHNICAL DATA

Common Name: Bluerye
 Species: Kentucky Bluegrass/Perennial Ryegrass Blend
 Growth Rate: Summer 3/4 to 1 1/4 inches per week
 Winter 1/4 to 3/4 inches per week
 Root Depth: 3 to 5 feet, depending upon soil type and watering patterns.
ADAPTABILITY
 Soils Range: Fair tolerance to saline soil conditions. Amendments are recommended for heavy clay soils to promote drainage.
 Temperature Tolerance: 0°F to 110°F
 ET₀: .6 minimum, .8 preferred
 pH Range: 5.0 to 8.5, 7.0 optimum

Shade Tolerance: Prefers full sun, but tolerates 40% shade.
 Geographic Range: (Refer to temperature chart above.)

STANDARDS AND MEASURES

100% Weed Free Sod
 Size: 5 to 10 sq. ft. per piece
 Big Rolls: 200 to 500 sq. ft.
 Soil Thickness 1/2 inch ± 1/8 inch, plus top growth
 500 to 540 sq. ft. per pallet
 Weight: 2000 to 3000 lbs. per pallet
 Grown from 100% Weed Free seed – 98% purity (2% inert maximum)
 Blend varies by location
 Seed Rate: 2 to 3 lbs. per 1000 sq. ft.
